Operator Theory and Boundary Eigenvalue Problems

Reviews

A brand new eBook with a new standpoint. I have got read through and I also am confident that I will gonna read again once again down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Miss Shannon Hill V)
Book Condition: New. Publisher/Verlag: Springer, Basel | International Workshop in Vienna, July 27-30, 1993 | The Workshop on Operator Theory and Boundary Eigenvalue Problems was held at the Technical University, Vienna, Austria, July 27 to 30, 1993. It was the seventh workshop in the series of IWOTA (International Workshops on Operator Theory and Applications). The main topics at the workshop were interpolation problems and analytic matrix functions, operator theory in spaces with indefinite scalar products, boundary value problems for differential and functional-differential equations and systems theory and control. The workshop covered different aspects, starting with abstract operator theory up to concrete applications. The papers in these proceedings provide an accurate cross section of the lectures presented at the workshop. This book will be of interest to a wide group of pure and applied mathematicians.
